

# Rain Flow

TOTAL GUTTER PROTECTION™

1. Gutters and downspouts must be thoroughly cleaned and any obstructions cleared before installation. Any underground drains that may have downspouts connected must be clear and free-flowing.
2. Remove the tape from a ten pack of Rain Flow Support Strips and measure and cut the strips to fit BETWEEN each hanger. Install the Support Strip by locking the channel of the support strip into the lip of the gutter.

3. Cut Rain Flow to fit OVER the hangers. Tuck the beveled edge of Rain Flow under the lip of the gutters and on top of the support strips.

Rain Flow can be cut using heavy-duty scissors such as FISKARS 9" Shop Shears  
Rain Flow Support Strips are easily cut using Craftsman Handi-Cut 2½" Utility Cutters
